For Location

- Organic Agriculture is a production method that promotes ecosystems, soil fertility and human health. It depends on the use of environmental processes, bio-diversity and agricultural cycles that suit local conditions rather than using inputs with negative impacts.
- The Organic Agriculture program was established in the year 2005 with a view to initiate quality teaching in the field of Organic.

# Career Opportunities

In government and the business sector:

- Central Laboratory for Organic Agriculture.
- Department of Experts of the Ministry of Justice.
